

Jet Clean

Machine dishwashing liquid

Features & Benefits

- Jet Clean possesses excellent cleaning power. It removes all soils normally encountered in commercial kitchens.
- Specifically formulated to clean efficiently in Perth's variable water supply. Jet Clean works just as efficiently in the soft water areas, located south of the Swan River, as it does in the northern suburbs where hard water predominates.
- Safe to use on china, plastic, melamine, copper, mild steel, stainless steel, glassware and cutlery.
- Jet Clean is a non-foaming and free-rinsing product leaving work streak-free and brilliantly clean.
- Special compounds in Jet Clean ensure that redeposition of soils does not occur.
- Do NOT use on aluminium, tin, brass or painted surfaces as damage may occur.

Use Directions

Equipment

For maximum economy the use of a Positron feeder is recommended. This automatically dispenses just enough Jet Clean to ensure a consistent quality clean. It eliminates the waste, labour cost, inconsistent cleaning and hazards associated with manual dosing procedures.

Dilution

Concentration or strength of 1 to 2 grams per litre is normally sufficient for most applications. The actual use concentration of Jet Clean depends on many factors. The most important of these are the amount of soil on dishes, water hardness, water pressure and water temperature.

Best results are obtained if the following procedures are implemented:

- Dishes are scraped before washing
- Plates and cutlery are properly stacked
- Dishes are washed immediately after use
- Wash water temperature is maintained at 65°C
- Rinse water temperature is maintained at 80°C
- An efficient rinse aid such as Slip is used.

Service

All electronic feeders will be installed, maintained and repaired free of charge by a Chemform serviceman. The appropriate chemical strength for each dishwasher will be established and maintained by our serviceman. Descaling operations, if required, will be undertaken by our trained staff.

Environmental Statement

JET CLEAN is detergent free

JET CLEAN is phosphate free

JET CLEAN can be used with dispensing equipment for portion control

JET CLEAN is chlorine free

JET CLEAN uses recyclable packaging

JET CLEAN is VOC free

Refer to the Environmental Guide section of our website www.chemform.com.au for more information.

Safety Information

JET CLEAN is classified as HAZARDOUS according to the criteria of Safe Work Australia and is classified as a DANGEROUS GOOD according to the Australian Dangerous Goods Code.

Refer to our safety data sheet (SDS) for more or consult your Chemform representative for further assistance.
