

Multistrip

Heavy duty floor stripper

Applications

Multi-Strip is an ammonia-free, caustic-free, low odour, heavy duty floor stripper designed to quickly remove heavily burnished or high build-up of metallised cross linked floor sealers. Multi-Strip is safe to use on vinyl, terrazzo, slate and marble floors. Multi-Strip must NOT be used on sealed timber floors as it may discolour the timber.

Use Directions

Add Multi-Strip to lukewarm or cold water as follows:

| Build-up | Multi-Strip | Water |
|-----------------|-------------|----------|
| Light Build-up | 1 litre | 6 litres |
| Medium Build-up | 1 litre | 4 litres |
| Heavy Build-up | 1 litre | 2 litres |

Stripping Procedure

- Placard the area – slip hazard. Do not strip too large an area at a time, ten (10) square metres of flooring is sufficient.
- Dilute Multi-Strip with water as directed above depending on build up.
- Apply the Multi-Strip solution liberally to the floor.
- Allow 3 to 5 minutes to penetrate
- Scrub with slow speed polisher fitted with basin brush or black pad.
- Do not splash Multi-Strip solution near walls, fittings or furniture. Strip these areas by hand with nylon pad.
- Pick up with wet/dry vacuum. If this is not available, use mop and bucket technique.
- Rinse the area using double bucket technique; one for clean water and the other for slurry off the floor.
- Allow to dry – a visual inspection should reveal a uniform floor.
- When dry – dry burnish.
- Dust mop before re-sealing.

Safety Information

Refer to our safety data sheet (SDS) for more information or consult your Chemform representative for further assistance.
